Concurrent Technologies Corporation Makes *WashingtonTechnology's* 2007 Top 100 Government Contractors List

Johnstown, PA, June 1, 2007—Daniel R. DeVos, President & CEO of Concurrent Technologies Corporation (*CTC*) today announced that *CTC* has been listed by *WashingtonTechnology* magazine for the first time in its "Special Report – Top 100 Government Contractors," May 14, 2007 issue.

For this 14th annual ranking, *WashingtonTechnology* expanded its research to look beyond strictly information technology (IT) contractors, and to consider contractors who provide professional, engineering, and management support services, as well as test, analysis, and research work in areas such as defense, aerospace, and the environment.

CTC is listed under the Professional Services industry sector. Additional sectors include Communications Equipment, Consulting, Defense, Engineering Services, Hardware, IT Services, Research, Satellite Communications, Systems Integration, Telecommunications, and Value-Added Reseller. Companies were evaluated on how they solve customers' problems, support critical missions, decrease costs, and provide technology-rich products and services to the federal government.

"*WashingtonTechnology's* recognition of *CTC* as one of the Top 100 federal prime contractors is true testament to *CTC*'s growing national reputation based upon our commitment to excellence in meeting the needs of our clients," said DeVos. "We are pleased to be included in this prestigious Who's Who that is recognized by key government and industry officials and professionals."

There is no self-submission process for the Top 100. According to the publication, the rankings are generated by an analysis of data from the Federal Procurement Data System. Once data is obtained, Federal Sources, Inc., the market research partner on the project, contacts companies and verifies the information.

Washington Technology is described as the national magazine for government contractors and focuses on the business of delivering technology and services to government, with an integrated media platform that serves the information needs of over 40,000 government contractors, systems integrators, resellers, value-added resellers, and IT service providers. The magazine's "Special Report – Top 100 Government Contractors" annually is its most read issue.

CTC's core capability areas include Advanced Materials and Manufacturing; Command, Control, Communications, Computers, Intelligence, Surveillance & Reconnaissance (C4ISR); Force Readiness; and Energy and Environmental Sustainability.

CTC is an independent, nonprofit, applied research and development professional services organization providing innovative management and technology-based solutions to a wide array of clients representing state and federal government as well as the private sector. Established in 1987, *CTC* operates from more than 35 locations with a staff of 1,500 employees. For more information about *CTC*, visit www.ctc.com.
