Concurrent Technologies Corporation Recognized as a 2010 Top 100 Government Contractor by *WashingtonTechnology* Magazine

Johnstown, PA, June 30, 2010 — Concurrent Technologies Corporation (CTC) has been recognized for the third time by *WashingtonTechnology* magazine as a Top 100 Government Contractor. The annual ranking of the top government contractors reveals a collection of companies that are keeping pace with customer demands and entering new markets to fuel their growth. Companies are evaluated on how they solve customers' problems, support critical missions, decrease costs, and provide technology-rich products and services to the federal government.

"CTC's presence on the Top 100 Government Contractors list is attributable to the company's longstanding ability to provide outstanding services to our clients in a very competitive marketplace," said Edward J. Sheehan, Jr., CTC's President & Chief Executive Officer. "We value our strong national reputation as a premier tax exempt organization that exists to solve advanced science, engineering, and technology problems in an expeditious manner for our clients. This recognition from *WashingtonTechnology* magazine is a great addition to the achievements that have been bestowed upon us in recent months. Not only is CTC one of the Top 100 Government Contractors, but we have also been recognized as a Most Valuable Employer for Military™ and as one of the Top 50 Nonprofits to Work for in the nation. These awards speak to CTC's commitment to our talented, dedicated employees and to our drive to provide innovative and cost-effective technology solutions to our clients."

WashingtonTechnology is described as the national magazine for government contractors, providing an integrated media platform that serves the information needs of more than 40,000 government contractors, systems integrators, resellers, value-added resellers, and IT service providers. In determining this annual ranking, *WashingtonTechnology* utilizes information from the Federal Procurement Data System (FPDS). A total of 702 product service codes (PSCs) are used to represent technology-related contract actions. These codes are used to capture the range of technology work and mission expertise that contractors provide to the federal government.
