On key issues of safety, we provide time-sensitive analysis and life-saving recommendations to help protect U.S. warfighters and DoD civilians.

Concurrent Technologies Corporation (CTC) is an independent, nonprofit, applied scientific research and development professional services organization providing innovative management and technology-based solutions. As a nonprofit organization, CTC conducts impartial, in-depth assessments and delivers reliable, unbiased solutions that emphasize increased quality, enhanced effectiveness, and rapid technology transition and deployment.

Accidental deaths and injuries among warfighters and DoD civilians can be mitigated by utilizing and analyzing data to make informed decisions that facilitate risk reduction. Our experience includes providing operational, analytical, and management support to the Office of the Secretary of Defense (OSD) Personnel Risk Reduction Office since 2005. As exemplified by our service to the OSD, CTC conducts time-sensitive analysis of the circumstances surrounding accidental fatalities and mishaps, evaluating trends and causes and identifying mitigations.

CTC
Concurrent Technologies Corporation
CTC employs a broad range of approaches to analyze, track, and manage mishap data to provide information to DoD leaders to support decisions that will help decrease aviation mishaps, improve acquisition processes and training, and address high risk behaviors such as alcohol and drug use, distractions, and fatigue.

Our subject-matter experts have the ability to create award-winning web-based application tools necessary to solve client problems. These tools are personnel-focused, data-driven, and they provide the OSD, the Defense Agencies, Military Departments, and other key DoD users, a central location point to collect, review, and evaluate the Department’s overall accident reduction, risk, health, and resilience efforts.

CTC supports many services in drug demand reduction including drug labs and research, outreach, education, recognition, and addressing the emerging threats of new designer drugs. CTC works with our clients to develop and implement testing protocols and relevant policies to address detection and prosecution of illicit drug use among service members of the military and civil service.

CTC provides assistance to more than 300 DoD sites worldwide with various progress towards their completion of a Safety Management System (SMS) by providing an integrated framework and comprehensive approach to DoD safety and occupational health systems management primarily focused on improving safety program performance.

**Unique Qualifications:**
CTC has operated the DoD’s Voluntary Protection Program Center of Excellence (VPP CX), now known as the Safety Management Center of Excellence (SMCX), since 2005 and has helped the government save money by reducing injury rates and lowering the associated costs. The DoD sites that have achieved VPP Star status have experienced a 71% reduction in incident rates, which is a $54 million estimated cost avoidance, a 16% improvement in lost work days due to new injuries, and a 32% improvement in total lost work days for Star sites versus DoD non-Star sites.
